

STRIKE IN THE MAY DAY

Big Gold Find in the Mine Near Eureka.

GOOD ASSAYS ARE MADE

CARLOAD LOTS VALUED AT NEARLY \$80,000.

Strike Considered by Mining Men to Be One of the Most Important Ever Made in Tintic District—No Such Sensational Values Since Mammoth Find.

A sensational strike of gold ore was made in the May Day mine, near Eureka, last Friday, but the officials of the company managed to keep it a secret until yesterday morning, just before the regular call of the stock exchange.

The strike was made at a depth of about eighty-five feet below the tunnel level and in a drift run, off from the end of the fifteen-foot upraise made from the 100 level of the mine sunk to that depth about 800 feet from the mouth of the tunnel.

Advises received from Eureka yesterday were to the effect that the new ore chute was being cut into by the drift and that the men employed there had taken out something like fifteen tons of ore and had gone no further than six feet into the new discovery.

There was a pretty happy crowd around the May Day office yesterday, and they had been judging from the looks of the assay certificates produced by Manager John A. Hunt. On Saturday and Sunday last average samples were taken across the face of the drift. The result of the first samples showed values of 26 per cent lead, sixty-nine ounces gold and 23.2 ounces silver. Those last Sunday disclosed a remarkable change in values. The lead contents were about even, 28 per cent, but the gold values ran up to 91.50 ounces and silver 1,410.50 ounces, which gives a value in the carload lots somewhere between \$70,000 and \$80,000.

The May Day strike is considered by mining men who are well acquainted with the mine, as being one of the most important developments ever made in the Tintic district, and it is claimed that no such sensational values have been obtained in the district since the Mammoth company discovered something like it in its famous stopes. Uncle Jesse Knight has taken out some almost miraculously rich ore in his Uncle Sam and Humbug properties, but the values he found there were no better than the find just made in the May Day.

It seems to be the universal opinion that the May Day is destined to become one of Tintic's greatest producers. It is located between the Humboldt and Dalton mines, about 1,200 feet of the vein which extends into those properties.

Manager Hunt will leave for the mine again tonight and will begin the work of getting out a shipment at once, which he expects to have on the market the last of the week.

May Day stock is strong on the curb yesterday afternoon at \$1.10 a share.

GOLD MOUNTAIN GOSSIP.

James Long, Jr., Reports on What is Going on in Camp.

James Long, Jr., the Gold Mountain district pioneer, whose efforts have been mainly directed to the opening of the Mammoth-Breckenridge group, into which a tunnel has been driven a distance of 1,118 feet to date, came up from camp again Sunday for the purpose of attending to business which requires his attention on this end of the line.

Long says the prospects for the camp never looked so bright and never before was so much activity manifested. The entrance into the district of the Kimberley-Huck combination, he says, has been the making of it, for everybody realizes that it means business. A fine new boarding and lodging house has been erected at the Annie Laurie and power plant and other improvements are well under way.

Before leaving Mr. Long learned that John Moore and associates were incorporating on the Gold Mountain property, but he was not able to learn particulars.

The recent strike in the Golden Star had not been sufficiently developed when Mr. Long left the district, but it was reported to be looking fine.

MINES OF JOPLIN.

Glen R. Bothwell Returns From a Trip There—Likes Utah.

Glen R. Bothwell, manager of the Sacramento mine, at Mercur, returned last Sunday from Joplin, Mo., where he has been looking over the zinc and lead mines of that section. He saw the Salt Lake contingent operating there and reports that they are all doing well and are looked upon as the representative mining men of the district.

The district is so lively as it was a few months ago, but nevertheless there is lots of development work going on, and between 300 and 400 mines are in operation.

Mr. Bothwell thinks the opportunities found in Utah are good enough for him, and he prefers to take his chances here rather than in the state of Missouri.

TO PUT UP A MILL.

Another Park City Mine to Concentrate Its Ores on the Ground.

Information from Park City is to the effect that sufficient ore has now been blocked out in the California group, at the head of Tiagney's canyon, to warrant the building of a mill and that work upon it will begin right after the first of the month. It will be equipped on the start with a Huntington crusher and one or two Wiley tables.

Superintendent Rosecamp informed the Park Record the other day that a sixty-foot breast of ore was now exposed in the upper workings and that the vein had developed a width of forty-five feet and was still at the same level. The ore will be handled by connections between the upper and lower works will soon have been made and then everything will be in readiness to make regular shipments.

The ore in the California carries silver, lead, gold and copper, the latter metal giving signs of increased value with every foot of depth attained.

INVESTIGATING PARK CITY.

Colorado Mining Men Looking For Openings in the Old Camp.

Speaking of his recent trip to Colorado Springs Judge Morris Sommer stated yesterday that he had been successful in interesting capital in a proposition, the details of which were not ripe for publication. What pleased him as much as anything which he learned on his trip was the deep interest shown in the Park City districts. It was his hope that the information relative to the old camp and gave it as his opinion that before the year closes much Colorado money will seek investment in the old camp.

No camp in Utah, the judge says, was so much talked about when Coloradoans began to investigate a sec-

tion and find that it has merit, they are not slow to secure a foothold.

Park Mining Notes.

(Park Record.)

Men are engaged in taking up the rails of the old Crescent tramway. James Farrell has the contract for the work.

Assays in samples of rock from the Copper King strike, reported in last week's Record, show 19.2 per cent copper, 61.50 ounces gold and 23.2 ounces silver. W. D. Bogar, was in camp first of the week, but has returned to Snake creek canyon, where he has resumed operations on his property, and will prosecute work all summer.

Two new ore vats, seventeen feet in diameter, have been put into use at the Marsac mill this week. Six pans and three settlers had to be removed to make room for them. This makes nine vats of these dimensions now employed in the Marsac.

Recent strikes in the Silver Key promise to put that property on the list of steady producers more any day. Several cars of good galena and copper ore have been taken out already, and the strike looks more promising every day.

Following are the shipments of ore from the Mackintosh sampler for the week ending May 25, 1900:

Silver King	1,350,000
Daily-West	875,000
Anchor con	390,000
Ontario	424,000
Apex	105,000
Valco	25,000
Loring Bros	52,000

Total number of pounds3,414,000

Yankee Con. Rumor.

It was reported on the streets yesterday afternoon that the forces employed at the Yankee Consolidated had quit work and that the padlock had been sprung on the door at the tunnel entrance. The rumor created considerable talk, and some thought it might be that a strike or ore had been found there and the management of the mine was trying to keep it from the public.

Captain Egan, chairman of the board of directors, was called out to the mine of such an occurrence. He has, however, given the foremen orders to allow no admittance to the mine.

Lower Mammoth Ores.

The Lower Mammoth Mining company will start loading some of its siliceous low-grade ores today for market, at a satisfactory rate with the American Smelting and Refining company having been agreed upon. Simon Bamberger, a member of the executive committee, which has the management of the mine in its own hands, said that the company has something like 1,000 tons of this class of ore on the dump, from which the company expects to realize from \$5 to \$10 per ton.

New Tintic Find.

Superintendent Bell of the Lower Mammoth mine, at Tintic, telephoned to Simon Bamberger yesterday that he had found a four-foot vein of iron ore, which assays taken at a depth of 24 feet, 25 per cent copper and some gold.

Rich Nevada Ore.

Reno, Nev., May 28.—Seven tons of ore from the Nevada location, three miles east of Reno, known as the Weid-kind find was worked yesterday at the Reno reduction works and yielded \$2,400.

Ore and Bullion.

The ore and bullion settlements made yesterday amounted to \$57,480, as follows:

McCormick & Co., bullion, \$3,700; ores, \$1,200.
T. R. Jones & Co., bullion, \$35,200; ores, \$9,800.
Bamberger & McMillan, ores, \$3,150.
Commercial National bank, ores, \$3,700.

The Metal Market.

Silver, per ounce, 64½c.
Copper, per pound, 15½c.
Gold, per ounce, \$198.75.
New York exchange, \$3.97½ at 4.02½.

Mining Notes.

The Mammoth mine handled six cars of ore yesterday.

The last mine of Bingham out of six cars of ore yesterday.

Ed Louie of the Grand Central staff was in town yesterday.

Uncle Jesse Knight had a carload of ore from his Humbug mine yesterday.

Manager G. R. Young of the Dalton mine of Marysville is in Idaho on business.

W. B. Anderson, manager of the Shawmout mine, was at that Bingham property yesterday.

A carload of ore from the Savanah mine, in northern Arizona, was at the sampler yesterday.

B. F. Miller, a "brown mining man" of Cherry Creek, was in the city yesterday.

Elmer Hill, manager of the Fortune properties, at Bingham, will go out to camp today.

The Glasgow Western Exploration company will have a couple of cars of ore on the market today.

Captain C. A. Henry has contributed an illustrated write-up for the latter June issue of the Mining Review.

The Taylor & Brunton sampling works reported the arrival yesterday of six cars of ore from Tintic and three from Frisco.

The Conklin sampler reported receipts yesterday of three cars of ore from Tintic, two from Bingham and one from Arizona.

The Utah mine officials have received notice that a carload of ore is at once awaiting shipment to the Salt Lake smelters.

Peter N. Campbell, a New York capitalist, is in the city, the guest of Colonel S. B. Miller of the Petro mine. Mr. Campbell is a cousin of Mr. Miller.

Reports from the West Mountain Placer are to the effect that eight feet of rich gravel has developed in No. 10 incline, much of it running as high as 75 cents to the pan.

William Hatfield has returned from a trip to Alta. He reports conditions evening up there and several properties have already begun to send down ore to the smelter.

It has been given out from reliable sources that the Boston & Montana will this fiscal year earn in excess of \$800,000 and it can easily pay \$50 a share in dividends. It is claimed the mine has \$450,000 in hand.

Manager T. R. Jones of the American Smelting and Refining company says the location for the new smelter has not yet been chosen. Surveys are still at work and he expects a decision will be reached in a few days.

Day's Scoville is back from a trip to Bingham, where he made an inspection of the work going on at the Argus and Dana claims. There is about eighteen inches of high-grade galena exposed in the lower tunnel.

WAS RECORD BREAKER

Heaviest Business of the Year on 'Change Yesterday.

SALES EXCEEDED \$24,000

LARGE BLOCKS OF GRAND CENTRAL TRANSFERRED.

May Day Creates a Sensation and Goes Up to \$1.09—Lower Mammoth Holds Its Own—Sales of Petro-Investment Stocks Show Improvement—Closing Prices.

Yesterday's session of the mining exchange was a record breaker. The value of the securities transferred amounted to \$24,210.87, and the average per share was not quite \$2. It was the biggest day of the year, and up to yesterday the heaviest sales made on any single day since Jan. 1 was on April 5, when they amounted to \$18,402.72; the next biggest day was on March 22, when the shares sold brought \$18,182.75; the third largest was on the 23rd inst., the sales aggregating \$17,306.50 out that day.

One notable feature of yesterday's transactions was the fact of the heavy demand for investment stocks, and only those of producing mines were sold at all, but all the better class shares appeared in better order and showed an improvement over last week's quotations.

Grand Central was the first to make a decided move. It was started off at \$5.88, and before it was left sales were recorded as high as \$5.97. At the close, however, it was down to \$5.90, the last bid made was \$5.90, while the offerings were at a cent higher.

Lower Mammoth was brought out in small quantities at about Saturday's figures. Petro sold down to 21 cents, and Star Consolidated was active, averaging 35 cents a share, or at the figures that prevailed on the curb late Saturday.

Silver King holders loosened at \$49; the prices paid for Valco ranged from \$8 up to \$8½ cents.

The real purpose of the day was in May Day. When that stock was called bids came from all parts of the pit. An offering at \$1 was promptly taken up; another at \$1.07 was accepted, which seemed to be a momentary stage for those who had the stock for sale. Finally sales were noted at \$1.09, and before the hammer dropped \$1.00 shares were transferred.

The buying was confined to no particular firm of brokers, all seeming to have a hand in the game. Insiders were said to be the buyers in the case of May Day. The closing quotations were:
